

#### Curriculum Intent Statement for Science

At Chase Terrace Academy we aspire for all of our students to achieve greater things than they ever thought possible.

We pride ourselves on being a warm and welcoming school that places community at the heart of everything we do. Our ambitious curriculum is enriching and inclusive, providing challenge and breadth for all. This empowers our students to become compassionate, confident and creative individuals who are resilient, respectful and equipped with a desire to take up a fulfilling role in society and the wider world.

Through the study of science we want to encourage our students to understand and value different cultures, countries and people as well as having an appreciation of how the world works and science in the media which can often be misinterpreted.

We aspire for our students to retain a sense of wonder about our vast and complex Universe. Future generations should be aware of how scientific and technological progress is changing the world, and to help the wider public understand it. It is important to ensure that these changes are heading in the right direction. In a democratic society, this means that everyone needs to have a basic understanding of science to make informed, responsible decisions about the future.

We put student-teacher relationships at the heart of what we do and therefore we start our lessons promptly and greet students at the door when they arrive and when they leave.

We provide the opportunity for those students with a particular passion for science to study single sciences. This gives students the scope to further broaden and deepen their scientific knowledge in preparation for study at A-level and beyond.

### Curriculum Implementation Plan

	S	Science Overall Big Picture	
	Term 1	Term 2	Term 3
Year 7	<ul> <li>Cells</li> <li>Particles &amp; the Particle Model of Matter</li> <li>Energy</li> </ul>	<ul> <li>Reproduction</li> <li>Separating Mixtures</li> <li>Electricity &amp; Magnetism</li> </ul>	<ul> <li>Ecosystems</li> <li>Acids &amp; Bases</li> <li>Space &amp; Waves</li> <li>End of year exam</li> </ul>
Year 8	<ul> <li>Nutrition &amp; Digestion</li> <li>Atoms, Elements (including Periodic Table) &amp; Compounds</li> <li>Forces</li> </ul>	<ul> <li>Respiration</li> <li>Chemical Reactions</li> <li>Light &amp; Sound</li> </ul>	<ul> <li>Plants &amp; Photosynthesis</li> <li>Chemical Quantities</li> <li>Pressure &amp; Speed</li> <li>End of year exam</li> </ul>
Year 9	<ul> <li>Maths skills &amp; science skills 1</li> <li>Cells</li> <li>Atomic structure &amp; Periodic Table</li> <li>Particle model of matter</li> </ul>	<ul> <li>Maths skills &amp; scie</li> <li>Transport in cells</li> <li>Energy changes</li> <li>Atomic structure</li> <li>Practical investigation</li> </ul>	& radiation (physics)
Year 10	<ul> <li>Biology</li> <li>Organisation</li> <li>Infection &amp; Response</li> <li>Chemistry</li> <li>Structure &amp; bonding</li> <li>Quantitative chemistry</li> <li>Physics</li> <li>Particle model of matter</li> <li>Atomic structure &amp; radiation</li> </ul>	Biology • Bioenergetics • Homeostasis Chemistry • Chemical changes Physics • Energy	<ul> <li>Biology</li> <li>Homeostasis</li> <li>Chemistry</li> <li>Energy changes</li> <li>Rate &amp; extent of chemical change 2 (equilibria)</li> <li>Physics</li> <li>Forces 1</li> </ul>
Year 11	<ul><li>Biology</li><li>Inheritance</li><li>Ecology</li></ul>	Biology • Ecology • Revision	Revision and exam preparation

Chemistry	Chemistry
Extent of chemical change	Using resources
Organic	Atmosphere revision
Analysis	Physics
Using resources	Electromagnetism
Physics	Space (single science only)
Forces (part 2)	Maths skills & science terms
Waves	Revision and exam preparation after
Electromagnetism	half term
Static electricity (single only)	
Space (single only)

	Р	hysics		
Knowledge and Skills – Students will be taught to	Reading, Oracy, Literacy and Numeracy	Formative Assessment	Summative Assessment	Link to GCSE Content
Module 3.1 - Measurements and their errors Content in this section is a continuing study for a student of physics. A working knowledge of the specified fundamental (base) units of measurement is vital. Likewise, practical work in the subject needs to be underpinned by an awareness of the nature of measurement errors and of their numerical treatment. The ability to carry through reasonable estimations is a skill that is required throughout the course and beyond.	Students should be able to identify random and systematic errors and suggest ways to reduce or remove them. Students should understand the link between the number of significant figures in the value of a quantity and its associated uncertainty. Students should be able to combine uncertainties in cases where the measurements that give rise to the uncertainties are added, subtracted, multiplied, divided, or raised to powers. Students should be able to estimate approximate values of physical quantities to the nearest order of magnitude. Students should be able to use these estimates together with their knowledge of physics to produce further derived estimates also to the nearest order of magnitude	Questioning in lessons Whole class feedback during lessons Regular verbal feedback Peer and self- assessment of written work HWk Additional support activities to address individual areas of weakness.	This module is embedded in all modules of work so is not explicitly assessed in a summative way. At the end of each module and at the key assessment points in the year, students will sit an end of year exam covering all the key ideas from the current year and some topics from previous years. Module one is a key component of these assessments.	The content here is grounded in mathematical skills developed at GCSE, both in maths and science. There is nothing students can't and haven't done before mathematically, however they may never have applied those skills in such as way e.e % and absolute uncertainties. Constant reminders and reinforcement is the key to progress.

	Р	hysics		
Knowledge and Skills – Students will be taught to	Reading, Oracy, Literacy and Numeracy	Formative Assessment	Summative Assessment	Link to GCSE Content
to Module 3.2 – Particles and radiation This section introduces students both to the fundamental properties of matter, and to electromagnetic radiation and quantum phenomena. Teachers may wish to begin with this topic to provide a new interest and knowledge dimension beyond GCSE. Through a study of these topics, students become aware of the way ideas develop and evolve in physics. They will appreciate the importance of international collaboration in the development of new experiments and theories in this area of fundamental research.	Students will use a range of mathematical skills as set out in appendix 1. In particular, module two provides specific opportunity for reinforcement of: Use of prefixes for small and large distance measurements. Use prefixes when expressing wavelength values. Conversion of prefixes in to standard form.	Questioning in lessons Whole class feedback during lessons Regular verbal feedback Peer and self- assessment of written work HWk Additional support activities to address individual areas of weakness.	At the end of each module and at the key assessment points in the year, students will sit an end of year exam covering all the key ideas from the current year and some topics from previous years. Module one is a key component of these assessments.	Simple 'Bohr model' of an atom in terms of protons, neutrons, electrons, and the relative masses of these particles. The idea of ions and isotopes. 'Atomic number' is used at GCSE and 'proton number, Z' is used at A-level. 'Mass number' is referred to in GCSE and 'nucleon number' in A-level. Evidence for the nucleus (Rutherford) and specific charge of nuclei, ions and protons/electrons and the concept of a nuclide with symbolic representation. A general appreciation of radioactive substances, the three types of radiation and their properties, safety, hazards, background and half life is assumed at A- level. Nuclear equation for $\alpha$ -decay is required. the
				half life is assumed at A- level. Nuclear equation for

		including the neutrino) is also required.
		Mathematical definition of
		half-life <u>and manipulation of</u>
		exponential decay equations
		are all required at A-level,
		<u>along with knowledge of</u>
		<u>natural logs (may not have</u>
		done this in maths at the
		point of teaching)
		Knowledge of the fissile
		substances used in thermal
		reactors and that the
		process involves the nucleus
		and neutrons as is the fact
		that fusion involves nuclei
		ʻjoining' at high
		temperatures.

	Р	hysics		
Knowledge and Skills – Students will be taught to	Reading, Oracy, Literacy and Numeracy	Formative Assessment	Summative Assessment	Link to GCSE Content
Module 3.3 – Waves GCSE studies of wave phenomena are extended through a development of knowledge of the characteristics, properties, and applications of travelling waves and stationary waves. Topics treated include refraction, diffraction, superposition and interference	General mathematical skills as set out in Appendix 1. In particular, using the gradient of a graph to determine a value of a constant in the general form of y-mx + c.	Questioning in lessons Whole class feedback during lessons Regular verbal feedback Peer and self- assessment of written work HWk Additional support activities to address individual areas of weakness.	Mini-assessments at key learning points within the module. At the end of each module and at the key assessment points in the year, students will sit an end of year exam covering all the key ideas from the current year and some topics from previous years. Module one is a key component of these assessments.	From GCSE: Longitudinal and transverse waves, their nature and properties, including speed of electromagnetic waves in a vacuum. The wave equations $v = f\lambda$ . Refraction of waves at an interface and diffraction, refractive index/Snell's law and total internal reflection (critical angle) Single slit diffraction, Longitudinal nature of sound waves and the requirement of a medium.

	Р	hysics		
Knowledge and Skills – Students will be taught to	Reading, Oracy, Literacy and Numeracy	Formative Assessment	Summative Assessment	Link to GCSE Content
Module 3.4 – Mechanics and materials Vectors and their treatment are introduced followed by development of the student's knowledge and understanding of forces, energy and momentum. The section continues with a study of materials considered in terms of their bulk properties and tensile strength. As with earlier topics, this section and also the following section Electricity would provide a good starting point for students who prefer to begin by consolidating work	General mathematical skills as set out in Appendix 1. In particular, use of trigonometry and Pythagoras theorem in vector work, scale drawing and measurement with vectors, svt graphs and their interpretation as a way of representing motion, calculating gradients from a graph to determine a constant and application of knowledge to problem solving situations.	Questioning in lessons Whole class feedback during lessons Regular verbal feedback Peer and self- assessment of written work HWk Additional support activities to address individual areas of weakness.	Mini-assessments at key learning points within the module. At the end of each module and at the key assessment points in the year, students will sit an end of year exam covering all the key ideas from the current year and some topics from previous years. Module one is a key component of these assessments.	From GCSE:The outcome of resultantforces through vector additionand the concept of equilibrium(resultant force=zero) forparallel forces, includingacceleration in the direction ofthe resultant force. $F = ma$ , Newton's three lawsare required. Motion in astraight line and definitions ofvelocity and acceleration,including graphicalrepresentation for uniformstraight line motion todetermine acceleration anddistance travelled.One suvat equation was met.Idea of equilibrium (balancedforces: $mg$ and resistiveforces). Knowledge of whythere is a terminalspeed(velocity). Interpretationof u-t graphs for objects fallingunder gravity with drag forcespresent is also included.Definition of a moment and theprinciple of moments, includingthe idea ofequilibrium/stability.

chaseterraceacademy

	Ρ	hysics		
Knowledge and Skills – Students will be taught to	Reading, Oracy, Literacy and Numeracy	Formative Assessment	Summative Assessment	Link to GCSE Content
Module 3.5 – Electricity This section builds on and develops earlier study of these phenomena from GCSE. It provides opportunities for the development of practical skills at an early stage in the course and lays the groundwork for later study of the many electrical applications that are important to society.	General mathematical skills as set out in Appendix 1. In particular, calculating gradients from a graph to determine a constant and application of knowledge to problem solving situations.	Questioning in lessons Whole class feedback during lessons Regular verbal feedback Peer and self- assessment of written work HWk Additional support activities to address individual areas of weakness.	Mini-assessments at key learning points within the module. At the end of each module and at the key assessment points in the year, students will sit an end of year exam covering all the key ideas from the current year and some topics from previous years. Module one is a key component of these assessments.	Circuit symbols; the terms, <i>I</i> , <i>Q</i> , <i>V</i> ; and the definitions of current, voltage (PD), and work done in a circuit. The concept of resistance ( R=VI ), and <i>I</i> - <i>V</i> characteristics for ohmic and non-ohmic components, and series/parallel circuits is common to both.

	Р	hysics		
Knowledge and Skills – Students will be taught to	Reading, Oracy, Literacy and Numeracy	Formative Assessment	Summative Assessment	Link to GCSE Content
		Questioning in lessons Whole class feedback during lessons Regular verbal feedback Peer and self- assessment of written work HWk Additional support activities to address individual areas of weakness. At the end of each module and at the key assessment points in the year, students will sit an end of year exam covering all the key ideas from the current year and some topics from previous years. Module one is a key component of these assessments.	From GCSE:Above and beyond references cited in Module4, knowledge of centripetal forces, their origins and how these forces depend on mass, speed and radius.The definition of centre of mass and stability in general is assumed as are the general properties of a simple pendulum.Basic model of constantly moving atoms, molecules and particles, as well as the different energy states of solid, liquid and gases. $Q = mc\Delta T$ Definition of SHC and measurement as well as ideas about cooling by
				evaporation. Latent heating and cooling curve graphs.

	Physics			
Knowledge and Skills – Students will be taught to	Reading, Oracy, Literacy and Numeracy	Formative Assessment	Summative Assessment	Link to GCSE Content
Module 3.7 - Fields and their consequences The concept of field is one of the great unifying ideas in physics. The ideas of gravitation, electrostatics and magnetic field theory are developed within the topic to emphasise this unification. Many ideas from mechanics and electricity from earlier in the course support this and are further developed. Practical applications considered include: planetary and satellite orbits, capacitance and capacitors, their charge and discharge through resistors, and electromagnetic induction. These topics have considerable impact on modern society.	General mathematical skills as set out in Appendix 1. In particular, calculating gradients and using intercepts from a y=mx+c graph to determine a constant and application of knowledge to problem solving situations. Graphs and their interpretation as a way of representing fields. Application of knowledge to problem solving situations. Use of log plots.	Questioning in lessons Whole class feedback during lessons Regular verbal feedback Peer and self- assessment of written work HWk Additional support activities to address individual areas of weakness.	Mini-assessments at key learning points within the module. At the end of each module and at the key assessment points in the year, students will sit an end of year exam covering all the key ideas from the current year and some topics from previous years. Module one is a key component of these assessments.	From GCSE: Magnetic field around bar magnet and solenoid. Motor effect. FLH rule. Generation of electricity. AC/DC. National grid. Transformers and transformer equation.

## Appendix 1.

## Mathematical requirements and exemplifications

### 6.1 Arithmetic and numerical computation

	Mathematical skills	Exemplification of mathematical skill in the context of A-level Physics
MS 0.1	Recognise and make use of appropriate units in calculations	<ul> <li>Students may be tested on their ability to:</li> <li>identify the correct units for physical properties such as m s<sup>-1</sup>, the unit for velocity</li> <li>convert between units with different prefixes eg cm<sup>3</sup> to m<sup>3</sup></li> </ul>
MS 0.2	Recognise and use expressions in decimal and standard form	Students may be tested on their ability to: • use physical constants expressed in standard form such as $c = 3.00 \text{ x} 10^8 \text{m s}^{-1}$
MS 0.3	Use ratios, fractions and percentages	<ul> <li>Students may be tested on their ability to:</li> <li>calculate efficiency of devices</li> <li>calculate percentage uncertainties in measurements</li> </ul>
MS 0.4	Estimate results	<ul> <li>Students may be tested on their ability to:</li> <li>estimate the effect of changing experimental parameters on measurable values</li> </ul>
MS 0.5	Use calculators to find and use power, <b>exponential and logarithmic functions</b>	<ul> <li>Students may be tested on their ability to:</li> <li>solve for unknowns in decay problems such as <i>N</i> = <i>N</i><sub>0</sub>e<sup>-λt</sup></li> </ul>
MS 0.6	Use calculators to handle $\sin x$ , $\cos x$ , $\tan x$ when $x$ is expressed in degrees or radians	<ul><li>Students may be tested on their ability to:</li><li>calculate the direction of resultant vectors</li></ul>

## 6.2 Handling data

	Mathematical skills	Exemplification of mathematical skill in the context of A-level Physics
MS 1.1	Use an appropriate number of significant figures	<ul> <li>Students may be tested on their ability to:</li> <li>report calculations to an appropriate number of significant figures given raw data quoted to varying numbers of significant figures</li> <li>understand that calculated results can only be reported to the limits of the least accurate measurement</li> </ul>
MS 1.2	Find arithmetic means	<ul><li>Students may be tested on their ability to:</li><li>calculate a mean value for repeated experimental readings</li></ul>
MS 1.3	Understand simple probability	<ul><li>Students may be tested on their ability to:</li><li>understand probability in the context of radioactive decay</li></ul>
MS 1.4	Make order of magnitude calculations	<ul> <li>Students may be tested on their ability to:</li> <li>evaluate equations with variables expressed in different orders of magnitude</li> </ul>
MS 1.5	Identify uncertainties in measurements and use simple techniques to determine uncertainty when data are combined by addition, subtraction, multiplication, division and raising to powers	<ul> <li>Students may be tested on their ability to:</li> <li>determine the uncertainty where two readings for length need to be added together</li> </ul>

# 6.3 Algebra

	Mathematical skills	Exemplification of mathematical skill in the context of A-level Physics
MS 2.1	Understand and use the symbols: =, <, <<, >>, >, $\propto$ , $\approx$ , $\Delta$	Students may be tested on their ability to: • recognise the significance of the symbols in the expression $F \propto \frac{\Delta p}{\Delta t}$
MS 2.2	Change the subject of an equation, including non-linear equations	Students may be tested on their ability to: • rearrange $E = mc^2$ to make <i>m</i> the subject
MS 2.3	Substitute numerical values into algebraic equations using appropriate units for physical quantities	<ul> <li>Students may be tested on their ability to:</li> <li>calculate the momentum <i>p</i> of an object by substituting the values for mass <i>m</i> and velocity <i>v</i> into the equation <i>p</i> = <i>mv</i></li> </ul>
MS 2.4	Solve algebraic equations, including quadratic equations	<ul> <li>Students may be tested on their ability to:</li> <li>solve kinematic equations for constant acceleration such as v = u + at and s = ut + ½ at<sup>2</sup></li> </ul>
MS 2.5	Use logarithms in relation to quantities that range over several orders of magnitude	<ul> <li>Students may be tested on their ability to:</li> <li>recognise and interpret real world examples of logarithmic scales</li> </ul>

## 6.4 Graphs

	Mathematical skills	Exemplification of mathematical skill in the context of A-level Physics
MS 3.1	Translate information between graphical, numerical and algebraic forms	<ul> <li>Students may be tested on their ability to:</li> <li>calculate Young modulus for materials using stress–strain graphs</li> </ul>
MS 3.2	Plot two variables from experimental or other data	<ul><li>Students may be tested on their ability to:</li><li>plot graphs of extension of a wire against force applied</li></ul>
MS 3.3	Understand that $y = mx + c$ represents a linear relationship	<ul> <li>Students may be tested on their ability to:</li> <li>rearrange and compare v = u + at with y = mx + c for velocity-time graph in constant acceleration problems</li> </ul>
MS 3.4	Determine the slope and intercept of a linear graph	<ul> <li>Students may be tested on their ability to:</li> <li>read off and interpret intercept point from a graph eg the initial velocity in a velocity-time graph</li> </ul>
MS 3.5	Calculate rate of change from a graph showing a linear relationship	<ul><li>Students may be tested on their ability to:</li><li>calculate acceleration from a linear velocity-time graph</li></ul>
MS 3.6	Draw and use the slope of a tangent to a curve as a measure of rate of change	<ul> <li>Students may be tested on their ability to:</li> <li>draw a tangent to the curve of a displacement- time graph and use the gradient to approximate the velocity at a specific time</li> </ul>
MS 3.7	Distinguish between instantaneous rate of change and average rate of change	<ul> <li>Students may be tested on their ability to:</li> <li>understand that the gradient of the tangent of a displacement-time graph gives the velocity at a point in time which is a different measure to the average velocity</li> </ul>
MS 3.8	Understand the possible physical significance of the area between a curve and the x axis and be able to calculate it or estimate it by graphical methods as appropriate	<ul> <li>Students may be tested on their ability to:</li> <li>recognise that for a capacitor the area under a voltage-charge graph is equivalent to the energy stored</li> </ul>
MS 3.9	Apply the concepts underlying calculus (but without requiring the explicit use of derivatives or integrals) by solving equations involving rates of change, eg $\frac{\Delta x}{\Delta t} = -\lambda x \text{ using a graphical method}$ or spreadsheet modelling	<ul> <li>Students may be tested on their ability to:</li> <li>determine g from distance-time plot for projectile motion</li> </ul>
MS 3.10	Interpret logarithmic plots	<ul> <li>Students may be tested on their ability to:</li> <li>obtain time constant for capacitor discharge by interpreting plot of log V against time</li> </ul>

	Mathematical skills	Exemplification of mathematical skill in the context of A-level Physics
MS 3.11	Use logarithmic plots to test exponential and power law variations	<ul> <li>Students may be tested on their ability to:</li> <li>use logarithmic plots with decay law of radioactivity / charging and discharging of a capacitor</li> </ul>
MS 3.12	Sketch relationships which are modelled by $y = k/x$ , $y = kx^2$ , $y = k/x^2$ , $y = kx$ , $y = \sin x$ , $y = \cos x$ , $y = e^{\pm x}$ , and $y = \sin^2 x$ , $y = \cos^2 x$ as applied to physical relationships	<ul> <li>Students may be tested on their ability to:</li> <li>sketch relationships between pressure and volume for an ideal gas</li> </ul>

## 6.5 Geometry and trigonometry

	Mathematical skills	Exemplification of mathematical skill in the context of A-level Physics
MS 4.1	Use angles in regular 2D and 3D structures	Students may be tested on their ability to: • interpret force diagrams to solve problems
MS 4.2	Visualise and represent 2D and 3D forms including two-dimensional representations of 3D objects	<ul> <li>Students may be tested on their ability to:</li> <li>draw force diagrams to solve mechanics problems</li> </ul>
MS 4.3	Calculate areas of triangles, circumferences and areas of circles, surface areas and volumes of rectangular blocks, cylinders and spheres	<ul> <li>Students may be tested on their ability to:</li> <li>calculate the area of the cross–section to work out the resistance of a conductor given its length and resistivity</li> </ul>
MS 4.4	Use Pythagoras' theorem, and the angle sum of a triangle	<ul> <li>Students may be tested on their ability to:</li> <li>calculate the magnitude of a resultant vector, resolving forces into components to solve problems</li> </ul>
MS 4.5	Use sin, cos and tan in physical problems	Students may be tested on their ability to: • resolve forces into components
MS 4.6	Use of small angle approximations including $\sin\theta \approx \theta$ , $\tan\theta \approx \theta$ , $\cos\theta \approx 1$ for small $\theta$ where appropriate	<ul> <li>Students may be tested on their ability to:</li> <li>calculate fringe separations in interference patterns</li> </ul>
MS 4.7	Understand the relationship between degrees and radians and translate from one to the other	<ul><li>Students may be tested on their ability to:</li><li>convert angle in degrees to angle in radians</li></ul>
